CHAPTERS ON THE MODERN GEOMETRY OF THE POINT, LINE, AND CIRCLE BEING THE SUBSTANCE OF LECTURES DELIVERED IN THE UNIVERSITY OF DUBLIN TO THE CANDIDATES FOR HONORS OF THE FIRST YEAR IN ARTS

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 142 pages. Dimensions: 9.7in. x 7.4in. x 0.3in. This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1865 edition. Excerpt: . . . points on the several lines. Ex. n. When, of a figure of any nature, variable in magnitude and position but invariable inform, three lines fixed relatively to it turn round fixed points; all lines fixed relatively to it turn round fixed points, and determine homographic systems of rays at the several points. The first parts of these properties have been already established in Art. 56; from which as it appears also, from the invariability of one point fixed relatively to the figure in either case, that the several points determine similar rows on their several lines in the former case, and that (as is otherwise evident from their necessarily revolving simultaneously through equal angles) the several lines determine similar pencils at their several points in the latter case; therefore and c. Ex. o. If the three vertices of a variable triangle of constant species move on fixed lines, their mean centres, for all triads of constant multiples (86), move on fixed lines, and determine homographic systems of points on the several lines. Ex. o. If the three sides of a variable triangle of constant species turn round fixed points, their central axes, for all triads of constant multiples (120), turn round fixed points, and determine homographic systems of rays at the several points. These properties are evidently particular cases of the preceding examples; the mean centres of the three vertices, and the central axes of the three sides, of a triangle of given species,...
