Brand New Book ***** Print on Demand *****.Excerpt from The Nature-Study of Plants in Theory and Practice for the Hobby-Botanist For the study of Nature it is essential to go to Nature herself, and no one, least of all the writer of this little book, who is essentially a close observer of Nature, would wish to advocate the teaching of natural science by books alone. On the other hand, the stimulus of a well-presented account, gathering up the knowledge gained from careful observation and experiment is undoubted, and in this respect most of the present work has been tested by the author and an appreciative audience of eager and inquiring young minds. The first part interprets to the young student of Botany the meaning of the many phenomena of plant life which he or she may have been studying, and represents an attempt at outlining a mental picture of the closely interdependent functions and of the adaptations observed among plants, by explaining the factors of vegetable life, whenever it is possible to do so, in terms familiarly used of human life.
