The left-heart lead, which was recently approved by the Food and Drug Administration, delivers electrical impulses directly to the heart from a pacing device implanted in a patients chest. The NASA-developed resin is highly flexible, resistant to chemicals, and can withstand extreme hot and cold temperatures. The super plastic is biologically inert, thus making it suitable for medical use, including implantable devices. The NASA-developed insulation material enabled the company to develop one of the thinnest left-heart leads available. An electronic nose developed for monitoring air quality on the International Space Station has shown promise as a new weapon against brain cancer. The electronic nose, developed by NASA to automatically monitor the stations air, is able to detect contaminants within a range of one to approximately 10, 000 parts per million. In a series of experiments, researchers used NASAs device to sniff brain cancer cells and cells in other organs. Their data demonstrated that the electronic nose can sense differences in odor from normal versus cancerous cells. These experiments will help pave the way for more sophisticated biochemical analysis and experimentation. Transfer of NASA technology to the private sector is performed by NASAs Innovative Partnerships Program. The agencys view is that advancing technology through partnerships enables it to address its own needs and apply NASA-derived technology to a range of applications that can provide broad benefit to the public. The program consists of three elements: Technology Infusion, Innovation Incubator, and Partnership Development. For FY 2010, NASA is requesting 184. 8 million for...
