The surface of a flat page of paper is an illustration of a plane surface or simply a plane. Any plane figure which is formed by straight lines is said to be bounded by straight lines. Such figures are known as polygons. The polygons more commonly discussed are those of three and four sides. They are designated as follows: (a) A polygon with three sides is called a triangle. (b) A polygon of four sides is called a quadrilateral. 145. Definitions. A triangle with one right angle is called a right triangle. Triangle ABC is such a triangle. A triangle with no right angle is called an oblique triangle. Triangle r DEF is such a triangle. If a triangle has two of its sides equal it is called an isosceles triangle. A triangle which has its three sides all equal to each other is called an equilateral triangle (i.e., all sides equal). 146. Problems on the Triangle. (a) Construct a right triangle by the method of 138. By the method of 142 add acute angles CAB and CBA. What result is obtained? Add the three angles of the A triangle by the same method. What is the result? (6) Draw an isosceles triangle with base line AB by taking equal radii from A and B and drawing arcs MN and PQ, intersecting at S. Connect S with A and with B. Then triangle ABS is an isosceles triangle, since it has two sides, AS...
